
Blank page?

Posted by jbohumil - 2007/05/04 18:30

Installed iWebcal and it was working for a few days, then suddenly stopped working. Now I just get a blank page when I try to view the link. I don't have control over the feed, so I can't be certain that something didn't change.

Here is the feed in case anyone has any ideas, I'm stumped!

<http://ical.mac.com/WebObjects/iCal.woa/wa/default?d=5&u=barrymaloney&v=0&y=2007&m=4&n=CFH%20Classes.ics>

Thanks for using the calendar! Does .mac know to send out an actual .ics file instead of a webpage? This seems to be an HTML rendering of the .ics file instead of the file itself.
