## port in url?

Posted by volleho - 2008/06/16 04:16

---

Hi,

is it possible to specify the port in the url? I'm asking because I have a server running and access my calendars on port 8008. But if I try to open this calendar with following url e.g.

webcal://user:pwd@www.domain.de:8008/calendars/users/user/calendar.ics I got following error message on the screen:

http://user:pwd@xxx.dyndns.biz/calendars/users/klaus/Geburtstage-privat.ics

Warning: iWebCal::include(error.php) : failed to open stream: No such file or directory in /homepages/17/d27890475/htdocs/joomla/components/com\_iwebcal/class/iWebCal.inc on line 375

Warning: iWebCal::include() : Failed opening 'error.php' for inclusion (include\_path='.:usr/lib/php5') in /homepages/17/d27890475/htdocs/joomla/components/com\_iwebcal/class/iWebCal.inc on line 375

Fatal error: Call to undefined function printErrorPage() in /homepages/17/d27890475/htdocs/joomla/components/com\_iwebcal/class/iWebCal.inc on line 376

Any idea?

BR, Volker.

Thanks for using the calendar! Does it work if you use http:// instead of webcal:// ?

Thanks for your quick response!

If I use http instead of webcal, then following message is shown on the screen:

http://user:pwd@xxx.dyndns.biz:8008/calendars/users/klaus/Geburtstage-privat.ics

Warning: iWebCal::include(error.php) : failed to open stream: No such file or directory in /homepages/17/d27890475/htdocs/joomla/components/com\_iwebcal/class/iWebCal.inc on line 375

Warning: iWebCal::include() : Failed opening 'error.php' for inclusion (include\_path='.:usr/lib/php5') in /homepages/17/d27890475/htdocs/joomla/components/com\_iwebcal/class/iWebCal.inc on line 375

Fatal error: Call to undefined function printErrorPage() in /homepages/17/d27890475/htdocs/joomla/components/com\_iwebcal/class/iWebCal.inc on line 376

If I copy this url to my browser, then I have to confirm a message box before the calendar could be accessed. I guess this is causing this error?

Is it possible to enter the user and pwd afterwards and not in the url?

BR, Volker

Ok, I see what's going on: you have Basic Authentication that you have to deal with. iWebCal doesn't have anything that handles this, but it's technically possible to code it using cURL or something similar.

Hello

And how to do? Switch to Digest Auth? Any clue would be helpful. A simple redame describing the requirement (for apache) would be nice. At the moment I'm unable to use it. The original readme doesn't help the joomla users.

Thanks

Is there any solution for this?

peace,  
Ron

When you assign a Web site whose Uniform Resource Locator (URL) contains a port number to a security zone in Microsoft Internet Explorer or in Windows Internet Explorer, you may find that the port number is missing from the URL the next time that you view the Web sites list for that zone.

For example, if you type http://MyWebSite:8080 in the Add this Web site to the zone box of the Restricted sites dialog box, click Add, and then click OK to add it to the Restricted sites zone, the URL is displayed as http://MyWebSite in the Web sites list the next time that you open the Restricted sites dialog box.
