
Podcast Suite 1.5 does\ 't work in IE

Posted by tanya - 2010/01/24 06:09

It works fine in Firefox and not in Explorer. What should I do?
ANd also, how to change the Player settings? Thank you.

Hello Tanya,

Thanks for using the suite! What specific part of the Podcast Suite doesn't work in IE? The player I have in there is one of the few free ones that I could find; it seems to work most of the time, but some people have reported issues with it. I used another player in the past, but people had issues with that one as well.

To adjust the player settings, go to Podcast Suite > Manage Clips, then click the Parameters button. There are some controls there on which player you want to use, as well as an option for using your own custom HTML instead.
